

# NATIVE Salesforce2SAP Integration

SKYVVA provides the only globally available 100% natively **Force.com built and powered Integration Service** for integrating salesforce.com cloud apps, ISV partner apps and custom-built apps into SAP Business Applications.

Native platform support - NO third party middleware required.

For companies going for **NetWeaver Process Integration**, SKYVVA provides a hybrid NetWeaver Process Integration and Force.com powered Integration Service.

SKYVVA's Force.com powered Monitoring and Messaging Services turn NetWeaver Process Integration originally designed for SAP2SAP and third party applications integration into a powerful Cloud Integration Solution.

Therefore, SKYVVA easily enables a strategy of using the Cloud to build a social layer of Agility around an SAP Core. This has become a strategic advantage for companies of all sizes, industries, and geographies.

## Features & Benefits

### Business Agility & Fast Process Innovation

A pure Cloud- and a hybrid Deployment Model - On Premise & Cloud Platform driven - guarantees high Process Flexibility and a fast adaption of business models

### Unparalleled Speed2Value

A "Configure only", "No Coding" approach enables an as yet unknown Speed to Value compared to the traditional Middleware approach

### Unmatched Cost Efficiency

No need for third party Middleware leads to "Close-to-Zero" maintenance cost and low TCO

### Enterprise-Level Management Environment

End2end Integration Process Visibility  
Proactive, exception based alerting, high security & scalability through the most trusted and secure cloud platform, Force.com, and the SAP NetWeaver Platform

The paradigm shift towards the Cloud Computing Model is an evolutionary process resulting in hybrid deployment models and hybrid processes. Thus, Cloud Integration is imperative.

SKYVVA's native Integration Services have been designed to cost-effectively manage the integration challenges associated with the Cloud Transformation. Given the fact that SKYVVA's Integration Services are built on Platforms IT people and Business Analysts are very familiar with, salesforce.com's cloud apps can be connected to SAP On Premise Applications with an as yet unknown speed and without extensive training. SKYVVA is supporting the entire Integration Lifecycle—manual, scheduled, event-driven upgrades just take a mouse click.

SKYVVA's pre-built SAP integration content (mappings, transformations, workflows) easily align salesforce.com's Sales & Service Clouds, Force.com, and ISV partner Apps with SAP Business Applications. Templates can be configured to specific process requirements without Coding in the Salesforce Look & Feel.

#### Supported Use Cases:
